

Environmental Policy Statement

As a key part of achieving our vision, we wholly commit to caring for the environment through an effective environmental management system.

As a manufacturer of engineering components and assemblies, we use the natural resources of the planet in the form of materials, energy, gases, and water. As a by-product of this activity, we create waste, which we minimise and control.

We are committed to complying with all applicable legislation, the prevention of pollution and to continual improvement.

We continually assess the environmental aspects of our operations and, through the setting of objectives and targets, ensure we have a positive effect on our environmental impact, both locally and globally.

We review this policy and our environmental management system at least annually.
